Introduction

This document defines the test plan for the File Sharing Mobile Application. The objective is to ensure that all core functionalities such as user login, signup, file uploads, downloads, sharing, and notifications are working as expected across Android and iOS platforms.

Objectives

- Validate that users can register and log in securely.
- Ensure successful file upload, download, preview, and sharing.
- Confirm system behavior under different network conditions.
- Ensure data security, encryption, and access control.
- Verify cross-device and platform compatibility.

Scope

- Functional testing of login, signup, file upload/download/share/delete
- UI/UX testing on Android and iOS
- Compatibility testing across screen sizes
- Performance testing for large file uploads
- Negative testing (invalid formats, large file sizes, etc.)

Modules to be Tested

- User Signup
- User Login
- Forgot Password
- File Upload
- File Sharing (via link)
- Delete/Move Files
- File Preview (PDF/Image/Video)

Test Deliverables

- Test Plan Document
- Test Scenario & Cases Document
- Test Summary Document
- Bug Reports
- Selenium Automation Script

Testing Approach

- Manual testing for UI, functionality, and usability validation
- Automation using Selenium for test cases

Entry and Exit Criteria

Entry Criteria:

- Stable build available on Android and iOS
- Valid credentials provided
- Defined user stories and acceptance criteria

Exit Criteria:

- All critical test cases passed
- No major/critical bugs remain open
- Final test summary approved by QA Lead

Testing Types

- Functional Testing
- Regression Testing
- UI/UX Testing
- Compatibility Testing
- Negative Testing
- Performance Testing

Roles & Responsibilities

<u>Roles</u>	<u>Responsibilities</u>
QA Engineer	Prepare test plan and review strategy
QA Engineer	Execute test cases, report bugs
QA Engineer	Automate critical test flows
Developer	Fix defects and support QA team
Product Owner	Confirm test coverage and sign off

Risks & Mitigations

<u>Risks</u>	<u>Mitigations</u>
Delay in Build Availability	Continues Sync with Dev Team
Unclear Requirements	Early Clarification with Product Owner
File size limit Issues	Add Validations and Clear error messages

Approvals

The team will send different types of documents for Client Approval like below:

- Test Plan
- Test Scenarios
- Test Cases
- Bug Reports
- Automation Scripts

Testing will only continue to the next steps once these approvals are done.
